

Our Services - Your Advantages

Services for the Solar-Log WEB Enerest™ XL Portal

Do you lack time and personnel to closely monitor and keep track of all of the messages from every PV plant on your Solar-Log WEB Enerest™ XL portal every day?

Then use Solar-Log™ WEB-4U to take advantage of our years of experience and expertise from over 263,000 Solar-Log™ devices installed worldwide. We are always here for you to provide reliable and professional PV plant monitoring with your Solar-Log WEB Enerest™ XL portal.

Valuable time and cost savings

Our specialists monitor your customers' PV plants daily and immediately detect errors. After consultation, we remotely perform any necessary modifications, allowing you to concentrate on your regular daily work.

Quick and straight-forward

To ensure that no open questions remain, we show you assessment approaches and solutions. Detected fault messages are reviewed, checked for plausibility and tracked in the ticketing system.

Reliable and competent

We generate customized PV plant reports for you and your customers. If an on-site service call cannot be avoided, we then provide all of the important information to the service technician in advance. This eliminates the need for the technician to perform time-consuming troubleshooting.

Independent and versatile

The Solar-Log™ system is compatible with inverters from all of the major manufacturers and with numerous components (battery storage systems, heat pumps, etc.). Thanks to this inverter-independence, you are able to offer your customers a wide range of inverter solutions.

Secure and efficient

With the configuration check, we ensure that your PV plants are operating efficiently and without faults. Only minimal effort is needed to determine whether your PV plants can be further optimized to operate more efficiently.

Professional and effective

If desired, we can take care of additional functions, for example the complete configuration of the Solar-Log WEB Enerest™ XL portal, recording and set up of PV plants and customized template designs based on your own corporate design. Let us take care of everything with our professional experience and expertise so that you can use your precious time effectively and focus on what is most important for you.

Our specialists

- use their know-how to support you,
- detect occurring errors immediately,
- perform any necessary modifications remotely (after consultation),
- generate customized reports for you and your customers,
- provide you with important information for troubleshooting,
- allow you to use your precious time effectively.

How would you like us to assist you?

We take care of monitoring your PV plants so that you can concentrate on your core business. With the Solar-Log™ WEB-4U and its optional additional services, we offer you and your customers continuous and reliable PV plant monitoring. As a competent partner, we are always there for you and ready to support you.

Would you like to see for yourself?
