

With new functions into the new year

Release of the Solar-Log™ App Enerest ToGo

Geislingen-Binsdorf, 16.01.2023.

The free Enerest ToGo app displays all production and consumption values of the PV system directly on the smartphone. If an error is detected by the Solar-Log WEB Enerest™ 4 portal, the app informs the user immediately. This means that all important information about the plant can be accessed at any time and on the move. With the release of Enerest ToGo Version 5 comes a whole package of new functions that include improved service and simplified handling.

Direct login with fingerprint or FaceID

The biometric login provides more comfort directly in the application. This can be activated or deactivated when logging into the new app version for the first time or subsequently in the settings.

All basic functions of the Enerest ToGo app in overview

A short tutorial explains the most important functions of Enerest ToGo to the user.

In future, new functions can be integrated as separate chapters of the tutorial and repeated in the settings at any time. This will make new topics more readily available.

Direct feedback from the app

The menu item „Help & Support“ now provides a direct line to the Solar-Log team. Here the user can, for example, create tickets with screenshots and feature requests and send them directly to Solar-Log.

Search for plants or fleets quickly and easily

This time-saving function is especially for the installer or plant supervisor. The search function makes it possible to find plants and fleets more quickly using names or serial numbers.

About Solar-Log GmbH

Solar-Log GmbH is one of the leading companies in the fields of PV monitoring, smart energy and feed-in management. The Solar-Log™ hardware and software products are used worldwide in over 140 countries to monitor photovoltaic systems, optimise self-consumption and regulate energy feed-in to the electricity grid. The portfolio in the Solar-Log WEB Enerest™ monitoring platform includes over 370,000 plants with a capacity of over 17 GWp.

Solar-Log™ has been a subsidiary of BKW AG since August 2015. BKW AG is an internationally active energy and infrastructure company based in Bern (CH).
