

Declaration of Conformity - x % Feed-in Regulation (as of Firmware Version 3.0)

Solar-Log™ Series

Solar-Log²⁰⁰, Solar-Log 300

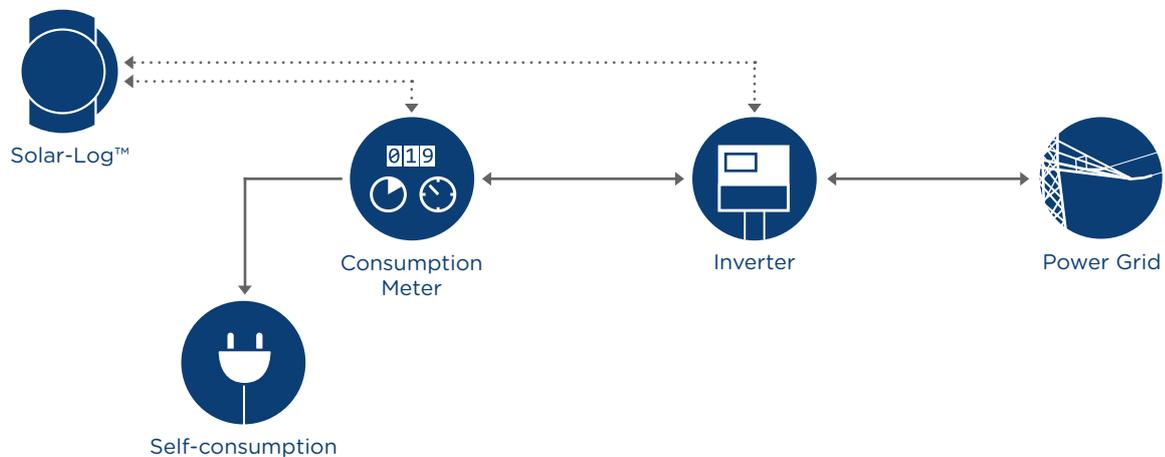

Solar-Log⁵⁰⁰, Solar-Log 1200

Solar-Log¹⁰⁰⁰, Solar-Log 2000

The Solar-Log™ models, as listed above, do - in normal operation - facilitate a modular power limitation between 0 and 100% in percentage steps, such as 70%, 60%, 0% or any other optional value of the installed power at the feeding point.

The actual limitation can be effected as fixed value or with consideration of the self-consumption. Hence, the inverters being connected with the Solar-Log™ devices can be regulated and controlled modularly to the effective needed actual power output.
