

Press Release

Navigant Research confirms:

Solar-Log™ is one of the World's Leading Companies for Residential Solar Monitoring and Home Energy Management Systems.

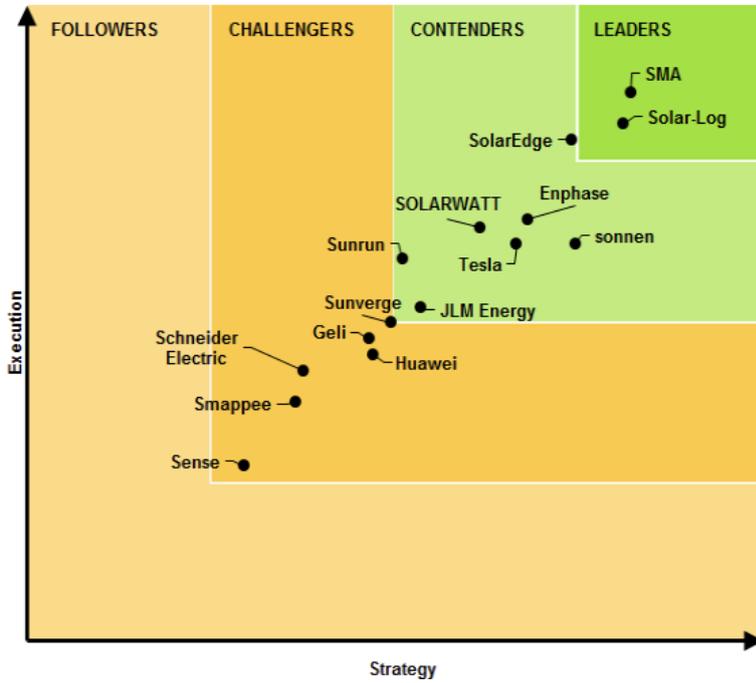

Binsdorf/Geislingen, Germany, September 27, 2017 – Today, solar PV monitoring is more than just visualizing PV plant data. The demand is for systems that provide professional monitoring, immediate error detection and flawless energy management. But, which systems can fulfill these three criteria? The international market research and consulting team, Navigant Research, set out to answer this question.

Navigant Research specializes in environmental technologies. They recently analyzed and assessed the global solar PV market and the 15 leading providers of Residential Solar Monitoring and Home Energy Management Systems. They ranked companies based on the criteria of technical functionality, product portfolio, geographical coverage, and the service life of the products. Solar-Log™ was ranked #2 among the 15 leading companies analyzed.

The Solar-Log™ product line includes the Solar-Log WEB Enerest™ online portal and the corresponding Solar-Log™ hardware products. In addition to professional PV plant monitoring and managing grid feed-in, the intelligent control and optimization of self-consumption is a core competence of the Solar-Log™. This allows various electrical appliances such as heat pumps, battery storage systems, heating rods and combined heat and power generators (CHP) to be flexibly managed, switched on or off and visualized, together or individually. Solar-Log™ is compatible with over 1,700 inverter models from 100 different manufacturers and with more than 100 component manufacturers.

Press Release

Solare Datensysteme GmbH (SDS)

Solare Datensysteme GmbH (SDS), based in the German city of Geislingen-Binsdorf, is one of the leading companies in the areas of solar monitoring, smart energy and feed-in management with global service for operators and installers. Since August 2015, SDS is a subsidiary of BKW AG (Bern, Switzerland) – a global company for energy and infrastructure with more than 6000 employees. SDS specializes in developing and distributing monitoring systems for photovoltaic plants, with core competencies that include innovative products with short development cycles and the best price-performance ratio.

SDS is the manufacturer of the Energy Management System Solar-Log™, which consists of the Solar-Log™ device family and the Solar-Log WEB Enerest™ Portal. The system is currently installed in 100 countries – monitoring 270,011 plants with a total output of 11.81 GWp.

SDS solutions make an important contribution to the successful integration of renewable energy into an intelligent power grid and help to make the successful transition to clean energy a reality.

More information about SDS can be found at www.solar-log.com.
